

# Year-Round High Tunnel Production FIELD DAY

November 2, 2018 — 1 - 4pm CT  
Magney Legacy Ridge Farm, Princeton KY

Magney Legacy Ridge Farm is a small family farm focusing on year-round seasonal vegetable production using high tunnels, low tunnels, and shade cloth. They strive to provide the healthiest vegetables using no till, organic practices to sustain the land for future generations and are, therefore, in transition to Organic Certification. Currently, they grow on less than two acres, including a small greenhouse and four high tunnels, from which they achieve 46 weeks of vegetable production for market.

Host farmer Angela Magney will share with us the practices they use on the Farm to achieve year-round production. Supplemented by the expertise of UK Extension personnel, this OAK Field Day will explore...

- Crop rotation and timing for year-round growing
- Soil health and fertility management
- Irrigation systems, including winter considerations
- Pest management in tunnels via sanitation and cultural practices

Additionally, Angela will provide insight into their success finding and securing local markets. The UK Center for Crop Diversification will extend the discussion considering statewide market data and research.

This Field Day is geared towards production farmers and will highlight mid-scale mixed vegetable production. Cost for this Field Day is \$5 for OAK Members; \$10 non-members.
