

Oldham Premises Testing

Oldham Premises I Testing of the barn's population of horses that had been exposed to EHV1 was completed yesterday (1/25/2017) with each horse testing NEG on both nasal swabs and whole blood. Having been greater than 14 days post exposure, and each horse now having two (2) negative sets of results – The Ky Office of State Veterinarian has released the quarantine imposed on January 5, 2017 and the horses are under no further restrictions.

Oldham Premises II Daily monitoring and assessment of the horses in the exposed quarantine barn continues with no evidence of further transmission of EHV1. Collection of samples (swabs and blood) from these horses has been scheduled to be completed next week to determine their eligibility to be released from restrictions as well.
